

## Aqualyze Pure Water Housing

Constructed using only pure virgin polypropylene materials containing no colourants, fillers, talc or additives means the SPECTRUM natural housing which complies with FDA requirements, is suitable for all food contact applications.

Suitable for high purity applications the Aqualyze pure water housing comes as standard with a secure 222 double O-ring seal. Designed as a simple three part construction the head and sump are secured tightly together using the threaded collar. Exceptionally smooth surfaces prevent particulate adhesion making it the perfect complement to high water purity requirements.

The SPECTRUM SFH-PN housing comes fully configured with three pre-drilled ports, one in the sump as a drain port and two in the head for either gauges or vents, as well as the port plugs, should the ports not be required.

For trouble free installation each SPECTRUM SFH natural housing comes as standard with a spanner and stainless steel bracket and assembly kit, to aid quick and easy cartridge changeouts.

-  **SPECTRUM™**
-  **High purity housing for critical applications with 3/4" ports**
-  **55°C**
-  **Polypropylene**
-  **4.0 bar**
-  **PED 97/23/EC**

### Key product features

- FDA compliant materials for food, beverage and electrical applications
- 100% pure polypropylene construction
- Complete kit for trouble-free installation
- Accepts 222/SOE (EG/ES) cartridges

### Accessories

#### Gauges

PG1 / PG2
