

## Twist-Lock POU RO Systems

The stylish design of the SPECTRUM Twist-Lock RO system has been created to fit perfectly into any domestic or commercial application.

Available as a complete system, with tank, tap, tubing, etc. or as a three stage stand-alone RO solution, the Twist-Lock system from the SPECTRUM range provides a practical and flexible RO solution.

Capable of removing up to 97% of most contaminants, this three stage system uses two high capacity carbon block cartridges and a high-purity RO membrane cartridge to produce 75 lpd of pure water.

The system also uses the same quick and convenient connections as SPECTRUM Twist-Lock single and double head POU cartridges which means this system requires no tools for filter changeouts, making it one of the most practical and user friendly RO systems available.

The ten litre tank, available with the complete system, provides a constant reserve of on-demand RO pure water. Economical and easy-to-use these two units are wall mountable for convenience and represent an ideal space saving solution.

- SPECTRUM™**
- Convenience, practicality and performance in one 3-stage RO system**
- 38°C**
- 6.9 bar**
- 3/8" inlet and concentrate 1/4" permeate**

### Key product features - RO membrane

- Average rejection rate: 97%**
- Max TDS: 2,000ppm**
- pH range: 4-10**
